

Qnit.

3 non-functional testing myths busted.

The quality checks teams skip —
and pay for later.

Swipe →

MYTH 1

Performance
testing is only
for launch day.

REALITY

Load, stress and soak tests belong in
your pipeline — not the week before
go-live.

MYTH 2

Security is the
security team's
problem.

REALITY

Reliability, performance and security
are quality attributes. They're
everyone's job — and testable.

MYTH 3

Non-functional
testing slows
delivery down.

REALITY

Catching a scalability issue in CI takes minutes. Catching it in production takes a weekend.

Qnit.

Ship cloud native with confidence.

See how we approach non-functional
testing.
